

EC 551 Advanced Digital Design with Verilog and FPGAs
Fall 2026, Prof. Douglas Densmore
Paper Review Game Overview (Rev3)

Objective: The goal of the game is to be the first team to reach 10pts based on your ability to successfully answer questions on the technical paper reading assignments provided in class.

Teams: 4-5 teams will be created by counting off by 4-5. Teams then assemble in different areas of the classroom.

Game Play: Teams ask other teams questions. The team being asked the question can answer it, pass it, or ask for a “professor question” from Prof. Densmore.

Scoring:

Correct Answer:

- 1pt to the answering team

Incorrect Answer:

- Original question: Questioning team gets 1pt
- Passed question: Team that passed the question gets 1pt
- Professor question: Answering team loses 1pt

Time limit:

- Questioning team – 30 seconds – **This is only for the first round; you be ready with questions in the subsequent rounds.**
- Responding team – 30 seconds

Question Order: Questioning teams go in round robin order (5, 4, 3, 2, 1, repeat, etc.). Cannot ask a team a question twice (including passes) until you have asked all the other teams a question. **You cannot ask a question twice until every other teammate has asked a question.**

Responding Player: Cannot respond to a question twice until every other teammate has responded. You CAN however engage in the 30 second, pre-response period.

Passes: Each team gets three passes per game. The passing team decides which team they want to pass to. **You cannot pass on a question that has already been passed on. You cannot pass a Professor question either.**

Prof. Question: Each team gets three professor questions per game.

Penalties: If you are: 1) Not ready with a question when it is your turn after round one or 2) you take longer than 30 seconds to answer a question, you lose one point. In the case of #1, you still need to ask a question however. In the case of #2, the team asking the question will have to ask another team.
